Sai Sumanth Reddy Kachi

saisumanthreddy216@gmail.com | 667-445-9499 | linkedin.com/in/sumanth14 | GitHub | Portfolio

Software Engineer with 3+ years of experience building full-stack web applications. Shipped production systems on AWS and Azure serving 5,000+ users using React, Node.js, and Express. Recent work includes integrating AI features into healthcare and enterprise platforms.

EDUCATION

University of Maryland, Baltimore County, Baltimore, MD — *May 2026*
Master of Science - Information Systems — GPA: 3.85
Relevant Coursework: System Design, Data Structures & Algorithms, Cloud Computing, Artificial Intelligence, Natural Language Processing

Dayananda Sagar Institutions, Bangalore, India — *Aug 2018 - July 2022*
Bachelor of Science - Computer Science — GPA: 3.77

SKILLS

Programming Languages: JavaScript, TypeScript, Python, C, C++, C#
Frameworks & Libraries: React.js, Node.js, Express.js, Next.js, NestJS, FastAPI, .NET
Cloud & DevOps: AWS (S3, Lambda, EC2), Azure, GCP, Docker, Kubernetes, Jenkins, CI/CD Pipelines, GitHub
Databases: PostgreSQL, MySQL, MongoDB, Redis, Supabase, Firebase, Oracle
Core Competencies: System Design, API Development, Microservices Architecture, REST APIs, Role-Based Access Control
AI Tools: LLM Integration, RAG Pipelines, LangChain, Model Context Protocol (MCP), Vector Databases

EXPERIENCE

Minnodi LLC — *Baltimore, MD*
Software Engineer Intern — *Nov 2025 – Present*

- Built backend services and AI-integrated pipelines for a healthcare portal, processing 500+ patient records through structured workflows used by clinicians for pre-consultation summaries.
- Integrated enterprise productivity tools into SharePoint environments and built workflow automation systems for public-sector clients, including a proposal generation pipeline.
- Built a GitHub integration service that parses commit histories via the GitHub API, generates structured summaries, and surfaces relevant diffs for engineering review.
- Designed and implemented document retrieval pipelines with role-based access control across 4 user tiers, connecting backend services to structured patient records and clinical data sources.

RSM US LLP — *Bangalore, India*
Software Development Engineer — *Aug 2022 – Jun 2024*

- Owned end-to-end design and Azure-hosted deployment of an Enterprise Mobility Solution (React.js, Node.js, Express.js), automating 95% of scheduling workflows for 5,000+ employees and saving 80+ admin hours monthly.
- Engineered a multi-functional API system with role-based access across 10 permission levels, serving 2,000+ users and 10 teams, improving cross-team development efficiency by 30%.
- Optimized performance across 10 enterprise applications through infrastructure tuning, code refactoring, and monitoring, reducing system latency by 30%.

Cognizant Technology Solutions — *Bangalore, India*
Programmer Analyst — *Mar 2022 – Jul 2022*

- Developed 20+ reusable TypeScript components following enterprise coding standards, reducing development time by 40% across production applications.
- Designed database models with indexing strategies that reduced query execution time by 40% for high-traffic operations.

PROJECTS

Invenio: Job Discovery Platform- *GitHub* — *React.js, Node.js, Express.js, AWS, Supabase*

- Built a full-stack job discovery platform with React, Node.js, Express, and Supabase, deployed on AWS, with multi-ATS scraping, intelligent deduplication, real-time alerts, and role-based filtering, serving 20+ users monitoring 20+ organizations.

We Zaap: Interview Simulator - *GitHub* — *React.js, FastAPI, PostgreSQL*

- Built a full-stack interview simulator with a React frontend and FastAPI backend, integrating a PostgreSQL vector store for context retrieval to generate role-specific questions across 10 job roles, currently serving 50+ active users.

Kernel: Multi-Agent Workflow Orchestration- *GitHub* — *System Design, Claude API, Python*

- Architected a multi-agent workflow runtime orchestrating 8 specialized agents across 3 phase-gated workflows, generating 20+ structured deliverables per cycle with mandatory approval gates, automated context handoffs, and cascading failure prevention.
